```yaml
stages:
  - build
  - staging
  - release
  - production

Maven Test and Build:
  stage: build
  script: mvn clean install
  # Need this config to pass the jar to next stages
  artifacts:
    paths:
      - target/*.war
    expire_in: 1 day

Deploy to Staging:
  stage: staging
  environment:
    name: Staging
  script:
    - export WEBAPP_FULL_NAME=$(basename target/*.war)
    - cp target/$WEBAPP_FULL_NAME /opt/tomcat/dace-webapps
    # ln -fsn will do the following : -f overrides if symlink already exists. -n will not follow previous symlink.
    # -s : standard option to have a symlink and not a hard link
    - export WEBAPP_NAME=$(echo $WEBAPP_FULL_NAME | sed 's/-.*//')
    - export WEBAPP_NAME="${WEBAPP_NAME}.war"
    - ln -fsn /opt/tomcat/dace-webapps/$WEBAPP_FULL_NAME /opt/tomcat/webapps/$WEBAPP_NAME
```
